

CV

Joe Nyland

59 Harper Close, Winnington, Northwich, Cheshire, CW8 4SU

Tel: 07568 541556

Web: joenyland.github.io

DOB: 24 September 1990

Skills

- 3 years experience in as a full stack developer using the following technologies:
 - Ruby, Rails, PHP, Python
 - HTML, CSS and JavaScript
 - Puppet
 - Apache and Nginx web servers
 - MySQL
- Works extensively with Amazon AWS cloud services on a daily basis, utilising their extensive APIs to manage and provision services. Also experienced configuring and working with VMware ESX/ESXi and Microsoft Hyper-V virtualisation technologies.
- Experience working with Google Webmaster Tools, Analytics and Adwords and their respective APIs in SEO marketing campaigns.
- Designed, built and optimised and now currently hosts and maintains small websites and web apps for local SMBs.

Work Experience

Senior Full Stack Developer, Formisimo, August 2014 - *Present*

- Maintaining a SaaS checkout and form analytics service: Formisimo. Clients include: Secret Escapes, Barcelona FC, Travelex, and Financial Times.
- Architecting, building and maintaining Nudgr: A real time machine learning based exit intent product. Nudgr uses automatic machine learning to improve the conversion rate of client's online forms and checkouts. From data modelling and algorithm optimisation through to implementing algorithms in place in the Nudgr real time prediction service. Clients include: Very, William Hill, Cornerstone, Secret Escapes, and Financial Times.
- Developing, refactoring and supporting PHP and Ruby backend code whilst working in a scrum style agile development team with daily stand up meetings, retrospectives, scrums, etc. Experienced working from user stories and in line with story point estimations.
- Practising TDD; utilising and building internal test suites using Rspec, Qunit, PHPUnit, and Selenium to write clean, reliable and well tested code.
- Integrating UI designs for the frontend from the design team, using JavaScript/jQuery/AngularJS and HTML/CSS.
- Designing, implementing and working with RESTful APIs, both internally and with 3rd party services.

Linux Engineer, UKFast, January 2013 - August 2013

- Working as part of a large support team, supporting several thousands of Linux servers, clusters and complex bespoke solutions. Gained experience of supporting and administering Linux systems in a large hosting environment, supporting a wide and diverse range of customer solutions and requirements.

- Working with team leaders, tending to customer problems and providing solutions, whilst liaising with a range of departments within the business.
- Providing technical pre-sales advice, offering help and advice to account managers to maintain strong relationships with client base and working with data centre (NOC) engineers in disaster recovery situations.
- Assisting with the research and development of internal business systems, applications and services.

System Support Engineer, Kaleida, November 2009 – January 2013

- Telephone support for around 400 users (laptops/desktops/mobile devices) and 30 servers, both for Kaleida internally and also for their external client services.
- Asterisk VOIP Communications Server: Played a key role in the development, administration and support of a cloud based outbound dialler solution using Asterisk. Clients included: BMW, National Trust, NHS Direct and Marks and Spencer.
- Monitoring and supporting internal and client services and infrastructure, including telephony systems, email services, databases and applications.
- Database administration for Microsoft SQL Server and MySQL databases.
